Pracovné skúsenosti / Work experiences

07/2015 - present

Main Purchaser

Zameranie spoločnosti:

Road construction

- » I am responsible for procurement and internal processes. It includes management of the CATO internal distribution system and all market surveys (parts and services suppliers), preparation and completion of all necessary national contracts, problem-solving, troubleshooting on the supplier's side, reporting, and collaboration with colleagues responsible for international contracts in Strabag AG.
- » As a member of the IQM team, I solve problems during the implementation of new IT tools/systems.
- » New BIM processes, Telematic and machine control are also in our scope.

07/2012 - 08/2014

Flood Protection Project Manager

Zameranie spoločnosti:

Self-government

- » Flood protection project for EU. Field survey and localization of ideal places for dams and other structures, material management, construction supervision
- » Documentation and digitization of maps and objects in GIS

01/2007 - 07/2012

Consultant

Zameranie spoločnosti:

Data processing

- » Initial consultant work on Siemens HealthCare project in Erlangen and onsite data gathering with design creation in multiple GB and US production sites.
- » Our goal was flawless addition of newly bought factories to Siemens SAP systems. It begins with on-site Process research and system architecture preparation. It was quite a challenge because production in the Healthcare area requires FDA certification and therefore process changes have to be strictly limited.
- » Coupling 4 isolated BASF SAP systems into one at on-site BASF project in Ludwigshafen - a lot of LSMW migration and serial numbers duplicates problems. As a Consultant, I was working directly with customer technicians. It involves plenty of out of the box thinking. We

were always looking for a winwin strategy and it was usually a hard task, mainly because required changes affected many production processes.

- » PM/QM module support at Rio Tinto (Alcan Project). Plenty of on-site knowledge transfer was needed - mainly in France, Swiss and Germany. The client has made a big amount of own development in SAP with PM modulelike functions even before the PM itself was introduced by SAP
- » Creation of an online mortgage system on the Tatra Banka project. programing and detection of flaws in the initial design.
